

To whom it may concern,

The Regional Municipality of York is in favour of the new licensing regarding ITS based applications. We are in the process of completing our own ITS strategic plan and wireless applications will be required for many of those projects. The Regional Municipality of York's traffic signal system communicates primarily using spread spectrum radio on the 900 MHz band. We look forward to the designation of this spectrum and the opportunities it will provide.

Regards,

Alex Leonienco
