The Tokaj terroir consists of clay or loess soil on volcanic subsoil. The microclimate and the proximity of the Tisza and Bodrog rivers are conducive to the proliferation of Botrytis (noble rot) and the subsequent desiccation of the grapes. With such conditions met local wine makers are able to make the famous Tokaj wine specialties like "Aszú". Taking tradition and local practice into consideration wine making in the region is perfected for centuries by local producers.

### Qualification

The Protected Designation of Origin "Alicante" is currently protected under the Regulation (EU) No. 1308/2013 of the European Parliament and of the Council of 17 December (enclosed as Annex I). As indicated in the extract from the EU geographical indications register (enclosed as Annex II), the date of registration is 13/06/1986 (date of publication in Official Journal of the European Communities of the "Amendment to the list of quality wines produced in specified regions", enclosed as Annex III). The particular characteristics of "Alicante" wines are transmitted through the soil, climate and the varieties themselves. A lot of sun and hours of intense sunlight during the summer, coinciding with the ripening of the grapes, result in a large aromatic explosion.

The climate and the richness of the soils allow a wide diversity of wines. The combination of the humidity influence of the Mediterranean Sea together with the dryness and hardness of calcareous soils and rocks, is what defines the wines of "Alicante" as fresher and more subtle than those of neighboring areas of the plateau or zones with continental climate. "Alicante" wines are characterized by a good body and, in many cases, mineral touches. These are wines that stand out for their dryness, good acidity and touches of ripe fruit, raisined grape. "Alicante" wines have an intense color, especially the red ones.
