To the Spectrum Licensing and Auction Operations Branch,

I am writing today regarding the structure of the upcoming 3500 MHz Band Spectrum Auction. I understand that how the Ministry of Innovation, Science and Economic Development (ISED) structures the auction will have implications for competition and pricing of services available through the next generation of network development.

I encourage the Canadian government to take steps to support sustainable competition in the market. It is essential that citizens, businesses, non-profits and governments are all able to access a competitive market for 5G services. Competition and choice will lead to more affordable pricing and will foster more innovation and support local economies.

Thank you for the opportunity to contribute to these consultations.

Yours truly,

Don Iveson
Mayor
