Calgary, AB T2P 5H1

Dear Mr. Vic Haddad,

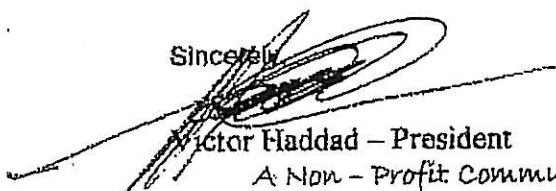

I am writing further to our conversation regarding the approval by the Canadian Radio-television and Telecommunications Commission (the "CRTC") of the use by TELUS Communications Company ("TCC") of deferral account funds to subsidize TCC's provision of broadband services in the following Alberta community in competition with Milk River Cable Club: Coufcs.

Milk River Cable Club has been providing broadband services since September 7th 2007 to the community listed above using cable and Alberta SuperNet transport services. Milk River Cable Club's services are available throughout the entire area of this community.

- The service that Milk River Cable Club provides is a 2Mbps high-speed internet connection for \$30/month. Milk River Cable Club's network is up and running 99.99% of the time.

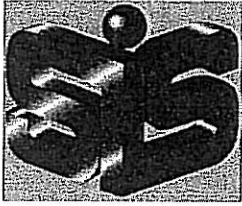

Milk River Cable Club was not aware of the Commission's process in respect of the use of deferral account funds until after release of the decision following discussions with Axia. Subsidized entry by TCC in the community served by Milk River Cable Club will severely compromise Milk River Cable Club's unsubsidized investment and its ability to provide service, and is not an appropriate use of public funds. Therefore, Milk River Cable Club fully supports Axia's request for a review and variance of Decision 2008-1 and rescission of the CRTC's approval for the use by TCC of deferral account funds to serve the community served by Milk River Cable Club.

Sincerely,

Victor Haddad - President

A Non - Profit Community Owned Society registered in Alberta

Dear Mrs. April Wallgren

I am writing further to our conversation regarding the approval by the Canadian Radio-television and Telecommunications Commission (the "CRTC") of the use by TELUS Communications Company ("TCC") of deferral account funds to subsidize TCC's provision of broadband services in the following Alberta communities in competition with SIS Strategic Information Systems Inc.(SIS): Hobbema and Gift lake.

SIS has been providing broadband services in Hobbema since October 3rd 2006 and in Gift Lake since August 17, 2007 using point-to-point and point to multi-point wireless technology and SuperNet transport services. SIS's services are available throughout the entire area of these communities.

The service that SIS provides is a 1Mbps full-duplex wireless internet service for \$59/month for broadband service. Our network is up and running 99.9% of the time.

SIS was not aware of the Commission's process in respect of the use of deferral account funds until after release of the decision, following discussions with Axia. Subsidized entry by TCC in the communities served by SIS will severely compromise SIS's unsubsidized investment and its ability to provide service, and is not an appropriate use of public funds. Therefore, SIS fully supports Axia's request for a review and variance of Decision 2008-1 and rescission of the CRTC's approval for the use by TCC of deferral account funds to serve the communities served by SIS.

Sincerely,
SIS Strategic Information Systems

Dear April Wallgren,

I am writing further to our conversation regarding the approval by the Canadian Radio-television and Telecommunications Commission (the "CRTC") of the use by TELUS Communications Company ("TCC") of deferral account funds to subsidize TCC's provision of broadband services in the following Alberta community in competition with Serbernet: McLennan.

Serbernet has been providing broadband services since August 18, 2006 to the community listed above using point-to-point and point-to-multipoint wireless technology and SuperNet transport services. Serbernet's services are available throughout the entire area of this community.

- Serbernet provides a wireless high-speed Internet service of 2Mbps of upload and 6Mbps of download for \$40-\$60/month. For further information on rates and packages, please refer to our website: <http://www.serbernet.com>. Serbernet's network is up and running 99.99% of the time.

Serbernet was not aware of the Commission's process in respect of the use of deferral account funds until after release of the decision following discussions with Axia. Subsidized entry by TCC in the community served by Serbernet will severely compromise Serbernet's unsubsidized investment and its ability to provide service, and is not an appropriate use of public funds. Therefore, Serbernet fully supports Axia's request for a review and variance of Decision 2008-1 and rescission of the CRTC's approval for the use by TCC of deferral account funds to serve the community served by Serbernet.

Sincerely,

Serge Bernier

Dear April Wallgren

I am writing further to our conversation, regarding the approval by the CRTC of the use by TELUS Communications Company of deferral account funds to subsidize TELUS to provide broadband services in the following Alberta community in competition with BISON WIRELESS LTD., in the community of HINES CREEK, ALBERTA.

Bison Wireless Ltd. has been providing broadband services since January 9th, 2007 to the community listed above using point to point and point to multipoint high-speed wireless technology and SuperNet transport services. Bison Wireless Ltd. is providing our entire community with high-speed wireless technology starting at 39.95 per month. We are providing residential and business packages with upload speeds of 2 megs and download speeds of 5 megs with our network up and running 99.99% of the time.

Bison Wireless Ltd. was not aware of the Commission's process in respect of the use of deferral account funds until after the release of the decision following discussions with Axia. Subsidized entry by TELUS in the community served by Bison Wireless Ltd. will severely compromise our unsubsidized investment and its ability to provide service and is not an appropriate use of public funds. Therefore, Bison Wireless Ltd. fully supports Axia's request for a review and variance of Decision 2008-1 and rescission of the CRTC's approval for the use by TELUS of deferral account funds to serve the community served by BISON WIRELESS LTD. of Hines Creek, Alberta.

Sincerely,

Dear Mrs. April Wallgreen,

I am writing further to our conversation regarding the approval by the Canadian Radio Television and Telecommunications Commission (the "CRTC") of the use by Telus Communications Company ("TCC") of deferral account funds to subsidize TCC's provision of broadband services in the following Alberta communities in competition with AB North.com Internet Services ("AB North"): Berwyn, Dixonville and Whitielaw.

AB North has been providing broadband services since January 20th, 2007 to each of the communities listed above using point to point and point to multi-point wireless technology and SuperNet transport services. AB North's broadband services are available throughout the entire area of these communities.

The service that we provide is a 1Mbps full duplex wireless broadband internet connection for a flat rate of \$50/month.

AB North was not aware of the Commission's process in respect of the use of deferral account funds until after the release of the decision, following discussions with Axia. Subsidized entry by TCC in the communities already served by AB North will severely compromise AB North's unsubsidized investment and its ability to provide service, and is not an appropriate use of public funds.

Therefore, AB North fully supports Axia's request for a review and variance of Decision 2008-1 and rescission of the CRTC's approval for the use by TCC of deferral account funds to serve the communities already served by AB North.

Sincerely,

Ken Foster,
President

Dear Mrs. April Walgren,

I am writing to further our conversation regarding the approval by the Canadian Radio-television and Telecommunications Commission (the "CRTC") of the use by TELUS Communications Company ("TCC") of deferral account funds to subsidize TCC's provision of broadband services in the following Alberta community in competition with Fatbanana Broadband: Gleichen. Fatbanana Broadband has been providing broadband services since April 20th 2007 to the community listed above using point-to-point and point-to-multipoint wireless technology and SuperNet transport services. Fatbanana's broadband services are available throughout the entire area of this community.

- Also attached to this letter is a description of Fatbanana Broadband's terms of service including current rates and speeds (upload and download) for broadband service. Fatbanana Broadband's network is up and running 99.99% of the time.

Fatbanana Broadband was not aware of the Commission's process in respect of the use of deferral account funds until after release of the decision following discussions with Axia. Subsidized entry by TCC in the community served by Fatbanana Broadband will severely compromise Fatbanana Broadband's unsubsidized investment and its ability to provide service, and is not an appropriate use of public funds. Therefore, Fatbanana Broadband fully supports Axia's request for a review and variance of Decision 2008-1 and rescission of the CRTC's approval for the use by TCC of deferral account funds to serve the community served by Fatbanana Broadband.

Sincerely,

Rob Grisdale

May 2nd, 2008

Axia NetMedia Corporation
3300, 450 1st Street SW
Calgary, AB T2P 5H1

Dear April Wallgren,

I am writing further to our conversation regarding the approval by the Canadian Radio- television and Telecommunications Commission (the "CRTC") of the use of deferral account funds by TELUS Communications Company ("TCC") to subsidize TCC's broadband services in several Alberta community in competition with MCSNet.

MCSNet coverage includes the following 16 communities identified in Appendix B of CRTC decision 2008- 1 (start dates are in parenthesis) :

Ashmont (2004)	Derwent (2007)
Flatbush (2008- Q2)	Jarvie(2007)
Mundare (2007)	Saddle Lake I.R. (2004)
Smoky Lake (2005)	St. Michael (2007)
Vilna(2005)	Clyde (2007)
English Bay (2008)	Legal (2008- Q2)
Pickardville (2007)	Rochester (2006)
Warspite (2005)	Waskatenau (2005)

We deploy using Motorola Canopy point to point with services starting as low as \$39.95/month (for a 1.7 mbps connection) in all areas.

MCSNet has been providing broadband services since since 1998 with services in the above communities starting as early as 2004. Since the advent of Supernet, we've been in a position to leverage this fibre network to further increase our network throughput and reliability.

We pride ourselves in achieving very high levels of network availability, typically 99.976% while providing mission critical network connectivity to thousands of business and residential subscribers throughout North Eastern Alberta.

MCSNet's services are available to residents living within town limits as well as rural residents throughout the surrounding areas.

MCSNet was not aware of the Commission's process in respect of the use of deferral account funds until after release of the decision following discussions with Axia. Subsidized entry by TCC in the community served by MCSNet may severely compromise MCSNet's unsubsidized investment and its ability to provide service, and is not an appropriate use of public funds. Therefore, MCSNet fully supports Axia's request for a review and variance of Decision 2008- 1 and rescission of the CRTC's approval for the use by TCC of deferral account funds to service communities already served by MCSNet.

Sincerely,

Mark Beland

CTO

MCSNet

May 21, 2008

VIA FACSIMILE

Mr. Robert Morin
Secretary General
Canadian Radio-television and Telecommunications Commission
Ottawa, ON K1A 0N2

Dear Mr. Morin:

Re: Part VII Application by Axia SuperNet Ltd. Seeking a Review and Variance and Clarification of Telecom Decision CRTC 2008-1, Use of Deferral Account Funds to Improve Access to Telecommunications Services for Persons with Disabilities and to Expand Broadband Services to Rural and Remote Communities

This letter is filed by Platinum Communications Corporation in support of the application filed by Axia SuperNet Ltd. ("Axia") seeking a review and variance of Telecom Decision CRTC 2008-1 (the "Decision").

Platinum Communications' mandate is to provide small communities and rural families in Alberta with world-class broadband access to the Internet. Platinum Communications will not be able to continue this mandate, realize on its substantial investments to date, or proceed with future investments if it is required to compete with subsidized services offered by TELUS. Platinum has received no subsidies and does not expect to receive subsidies. However, Platinum cannot be expected to compete with subsidized services offered by the incumbent monopoly telephone company in Alberta – a company with substantially more resources at its disposal than Platinum.

Platinum Communications provided to Axia a letter dated March 12, 2008 which was attached to Axia's Application. The letter identified three communities – Elkwater, Morinville and Stirling – in which Platinum Communications provides retail broadband Internet access services at terms and conditions, including rates, that are comparable to retail services offered in urban areas. Since preparing that letter, Platinum Communications has conducted a more detailed review of the list of approved TELUS deferral account communities in Appendix B to the Decision. As a result of that review, Platinum has determined that Morinville is not an approved deferral account community. Platinum has also determined that it is providing comparable retail broadband services in 7 Alberta communities that were approved for deferral account funding in the Decision. The 7 communities are:

- Burdett
- Elkwater
- Seba Beach
- Stirling

- Tilley
- Legal
- Pickardville

In addition, Platinum Communications may serve Coutts, which is also an approved deferral account community, before the end of this year.

Platinum Communications has established an extensive point-to-point and point-to-multi-point wireless footprint, which is interconnected to the SuperNet, in order to provide world class service throughout these and other communities in rural Alberta. The services that Platinum Communications provides are a 2 Mbps – 5 Mbps wireless Internet service ranging from \$39.95 - \$54.95/month. The network is up and running 99.9% of the time.

The provision of deferral account subsidies to TELUS to provide competing services in communities served by Platinum Communications is fundamentally unfair and anti-competitive. It will compromise the ability of Platinum Communications and other small ISPs to compete in these communities and to extend their networks and services to other rural and remote communities in Alberta. This is not consistent with the Commission's mandate to promote and rely on market forces, to the maximum extent feasible.

Accordingly, Platinum Communications supports Axia's Application and, at a very minimum, asks the Commission to review and revoke its approval of deferral account funding for the communities of Burdett, Coutts, Elkwater, Seba Beach, Stirling, Tilley, Legal and Pickardville.

Sincerely,
PLATINUM COMMUNICATIONS CORPORATION
