

**York Region Amateur Radio Club**  
**60 Meter Consultation Survey**

Now that you've read about it, why not respond with your feelings? Remember, 60 meters will eventually be available to all amateurs. Just fill out the form, print it, then email it as an attachment to spectrum.engineering@ic.gc.ca as well as regulatory@rac.ca  
It must be received prior to June 12<sup>th</sup> .

Industry Canada is seeking input on five items. **Radio Amateurs of Canada (RAC)** feels it is important for amateur radio operators to comment on this proposal and indicate their preference for the rules governing the frequencies going forward.

1. Should Industry Canada allow amateur radio operators the use of five frequencies that are harmonized with the US on a no-protection, no-interference basis? These channels are 5332kHz, 5348kHz, 5358.5kHz, 5373kHz, 5405kHz. Transmissions would be limited to a 2.8Khz bandwidth centered on these frequencies.      Yes       No
  
2. Should Industry Canada harmonize the emission modes and designators on these five channels? In the US they are limited to telephony, data, RTTY and CW.      Yes       No
  
3. Should Industry Canada specify a maximum radiated power of 100 watts peak envelope power?      Yes       No
  
4. Should Industry Canada allow Canadian amateurs access to the 5329kHz channel? Transmissions would be restricted to 2.8 kHz centered on this frequency. This would be a Canada only channel.      Yes       No
  
5. Should Industry Canada specify emission designators and peak power for this sixth channel?  
Yes       No

If so, what would those be?      100 watts       More than 100 watts       AM       FM   
All digimodes
